

Health & Safety Policy

Omnia Projects are an Engineering Consultancy providing multidisciplinary expertise to the energy sector. We are committed to conducting our business in such a way as to eliminate hazards and reduce health & safety risk, to ensure that we do not harm or injure anyone due to our operations, including our employees, workers, customers, visitors, and the general public. We achieve this commitment through ensuring that the required resources are always available and settings health & safety objectives and targets as part of our overall business strategy. Most importantly, our core values of transparency and candor, are essential in developing a culture of open and honest discussion to drive continual improvements in health and safety performance through consultation and participation of workers. We ensure that we meet and exceed the minimum standards set by our clients, and use legislation and best practices as our minimum standards for compliance. We ensure that all of our employees work to and achieve these principles, and we will only engage with suppliers who will work with us to achieve this level of excellence. The Directors of Omnia Projects will provide appropriate information, instruction, training and supervision to all workers to ensure that we fulfill our legal duties and moral obligations. Where we lack the appropriate expertise in-house, we will ensure that we seek professional services and support to ensure that we achieve this. We are committed to implementing a business management system that meets or exceeds the requirements of BS EN ISO 45001:2018 and we will maintain accreditation to this standard. The policy is formally reviewed at least annually.
